Sample guide: open your first web page on your computer

This is the template for every hands-on guide. Real guides will follow the lessons.

Starter file (example)

1 Make a folder

Make a new folder called mypage on your Desktop.

```
mkdir ~/Desktop/mypage
```

```
cd ~/Desktop/mypage
```

Terminal

```
$ mkdir ~/Desktop/mypage
$ cd ~/Desktop/mypage
$ _
```

What you should see (example). Your real screenshot will be added.

2 Start a tiny web server

Copy this line into Terminal and press Enter.

```
python3 -m http.server 8000
```

Terminal

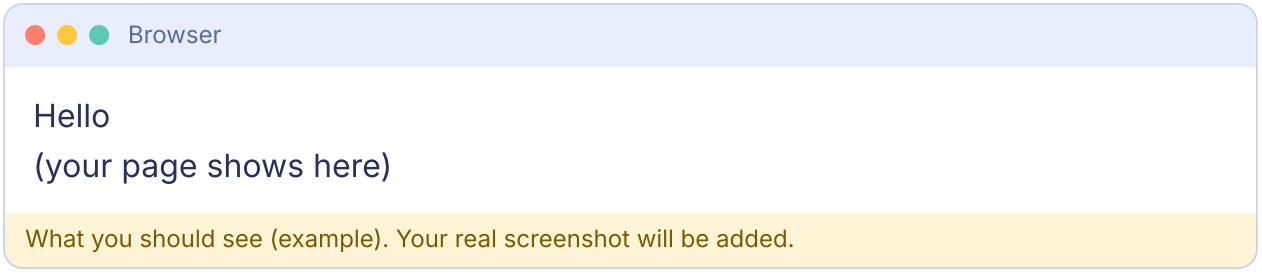

```
$ python3 -m http.server 8000
Serving HTTP on :: port 8000 ...
```

What you should see (example). Your real screenshot will be added.

3 Open it

Open your browser and go to the address below.

```
http://localhost:8000
```

What you should see (example). Your real screenshot will be added.

If it goes wrong

- If you see 'command not found', ask a parent to help install Python.
- Press Control and C together to stop the server.
